I'm working on a communication between the protection relay ABB REF615/RET615 and AC800M controller via OPCSERVER without going with CI868 module. the problem that i have is that i get only the primary measurements of the CT and VT of the current, voltages, powers... and i couldn't find how to multiply it by the nominal values. so if you have a solution it would be kind of you to show it to me.

communication between the protection relay ABB REF615 ...

It is not necessary to update the Windows operating system when updating to 6.0.3 as the two operating systems can co-exist in the same system. For example, when a PC fails and needs to be replaced, a new Windows 10 compatible machine can be added while the rest of the system remains at Windows 8.1.
