LibGen is a unique concept in the category of eBooks, as this Russia based website is actually a

search engine that helps you download books and articles related to science. It allows you to download paywalled content for free including PDF downloads for the stuff on Elsevier's Science Direct website. Even though the site continues to face legal issues due to the pirated access provided to books and articles, the site is still functional through

various domains.

Denavit-Hartenberg (DH) Convention. The Robot Arm Free Body Diagram (FBD) The Denavit-Hartenberg (DH) Convention is the accepted method of drawing robot arms inFBD's. There are only two motions a joint could make: translate and rotate. There are only three axes this

could happen on: x, y, and z (out of plane).

A 5DOF design, the Zortrax Robot Arm isn’t

necessarily the strongest for it’s size, with only a 100-gram maximum payload, but it has a very impressive fully 3D printed design that makes it worth mentioning. It is unique in that only three axes are powered, while the others are positioned by hand.
