Machining And Machine Tools By

Machining is a process in which material is removed from a workpiece to shape or finish it into a desired form. Drilling, holemaking, milling, turning, and threading tools are attached to compatible machinery such as a lathes, drill presses, or CNC machines to perform machining operations on the workpiece. The workpiece is typically a piece of raw material, sheets or rolls of stock, or an existing part, and the machine setup is typically guided by the type of material being worked on and the ...

MACHINING OPERATIONS AND MACHINE TOOLS

Machining is manufacturing process that involves removing materials using cutting tools for getting rid of the unwanted materials from some workpiece and converting it into the shape you desire. A large piece of stock is used for cutting the workpiece. The large stock might be in any shape such as solid bar, flat sheet, beam or even hollow tubes.
