The Botanist And The Vintner

In the mid-1860s, grapevines in southeastern France inexplicably began to wither and die. Jules-Émile Planchon, a botanist from Montpellier, was sent out to investigate. He discovered that the vine roots were covered in microscopic yellow insects. What they were—and where they had come from—was a mystery.

The Botanist and the Vintner : How Wine Was Saved for the ...

Christy Campbell's The Botanist and the Vintner: How Wine Was Saved for the World, recounts in vivid detail the events that would unfold over the following forty years as France, and soon the rest of the wine regions of Europe, grappled with a foe they could hardly see, let alone understand. These events, and the various personalities that emerged to both explain and do battle with the insect that would eventually kill nearly every single grape vine in continental Europe make for an epic ...

In the mid-1860s, grapevines in southeastern France inexplicably began to wither and die. Jules-Émile Planchon, a botanist from Montpellier, was sent to investigate. He discovered that the vine roots were covered in microscopic yellow insects. What they were and where they had come from was a mystery.

Book: The Botanist and the Vintner | FanFare

Botanists and vintners were left wondering where the insects came from and how they spread. The scientists noted that vines imported from the Americas didn't succumb to the insect, leading a few botanists and vintners to recall the recent writings of Charles Darwin on adaptation. The insect, a type of aphid, originated in the Americas.
